

Film Title and Release Date: *Welcome to Macintosh* (2008)

Length of Film in Minutes: 83 minutes

Film Genre: Documentary

Reviewer Name and Grade: Dasun A., 9th Grade

Date Reviewed: August 27, 2022

Welcome To Macintosh is a documentary about the history of Apple's revolutionary computer line, known as the Macintosh. The movie teaches you about the story of the rise of Apple's Macintoshes, and how it impacted the world. The documentary talks about the original Apple computer and the Macintosh line. It also talks and interviews previous Apple employees. The movie is easy for a viewer who is interested in this topic to understand. It is a bit slow though so some watchers might get bored. The wonderful documentary is balanced, it shows no biased view at all, and shows criticism and praise. In the documentary, it talks about the first Apple computers, and shows the very priceless few that are left, then it moves on and talks about the Macintosh and the Lisa, two computers built to compete with IBM's very own PC. It then talks about how Steve Jobs and Steve Wozniak, the founders of Apple, left the company. Woz quit, while Steve was forced out. It then tells how Apple fell into a dark time. The documentary is well written, and I enjoyed it. I definitely would recommend others who like tech, and enjoy history, to watch this movie.

Was the pace of the film too fast, too slow, or just right?

It was a bit slow

What grade level(s) is this film appropriate for?

6 grade and above

Rating:

I rate this film 5 stars, as it was enjoyable.
